Aluminum profile

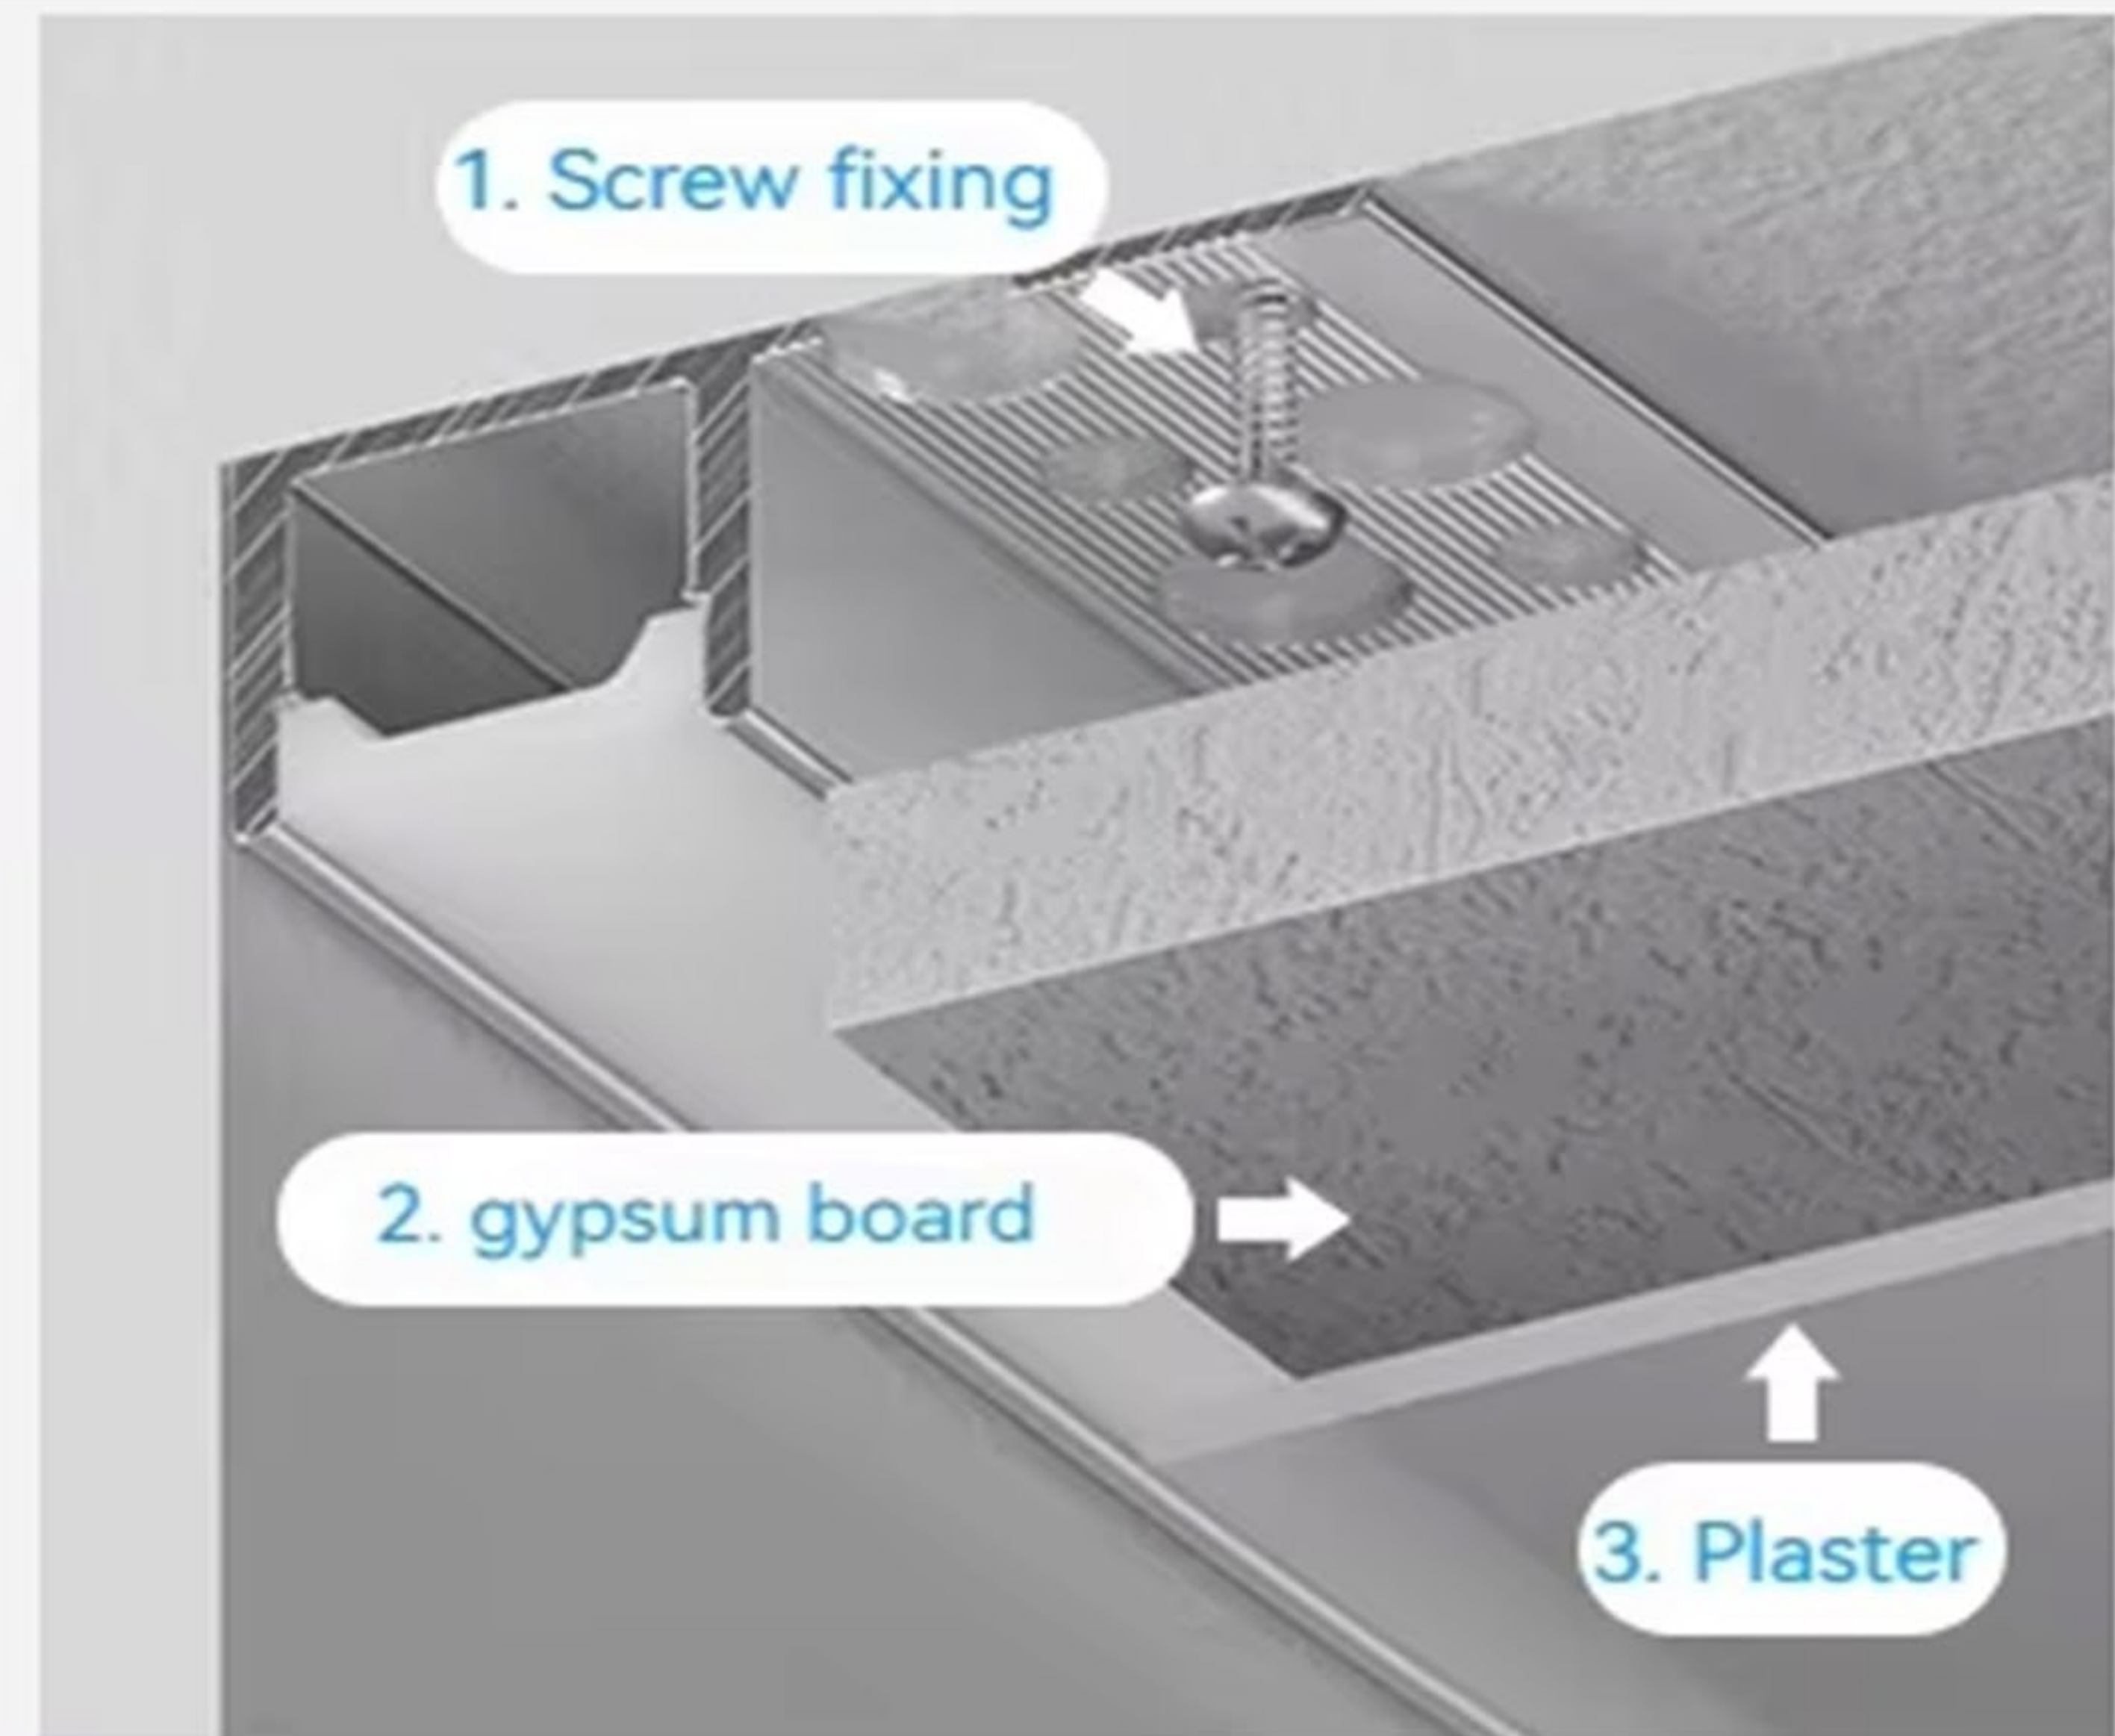

Profile /6514mm/Recessed

Minimum Bending Radius of 15cm for Achieving Circular Effects on Compact Surfaces

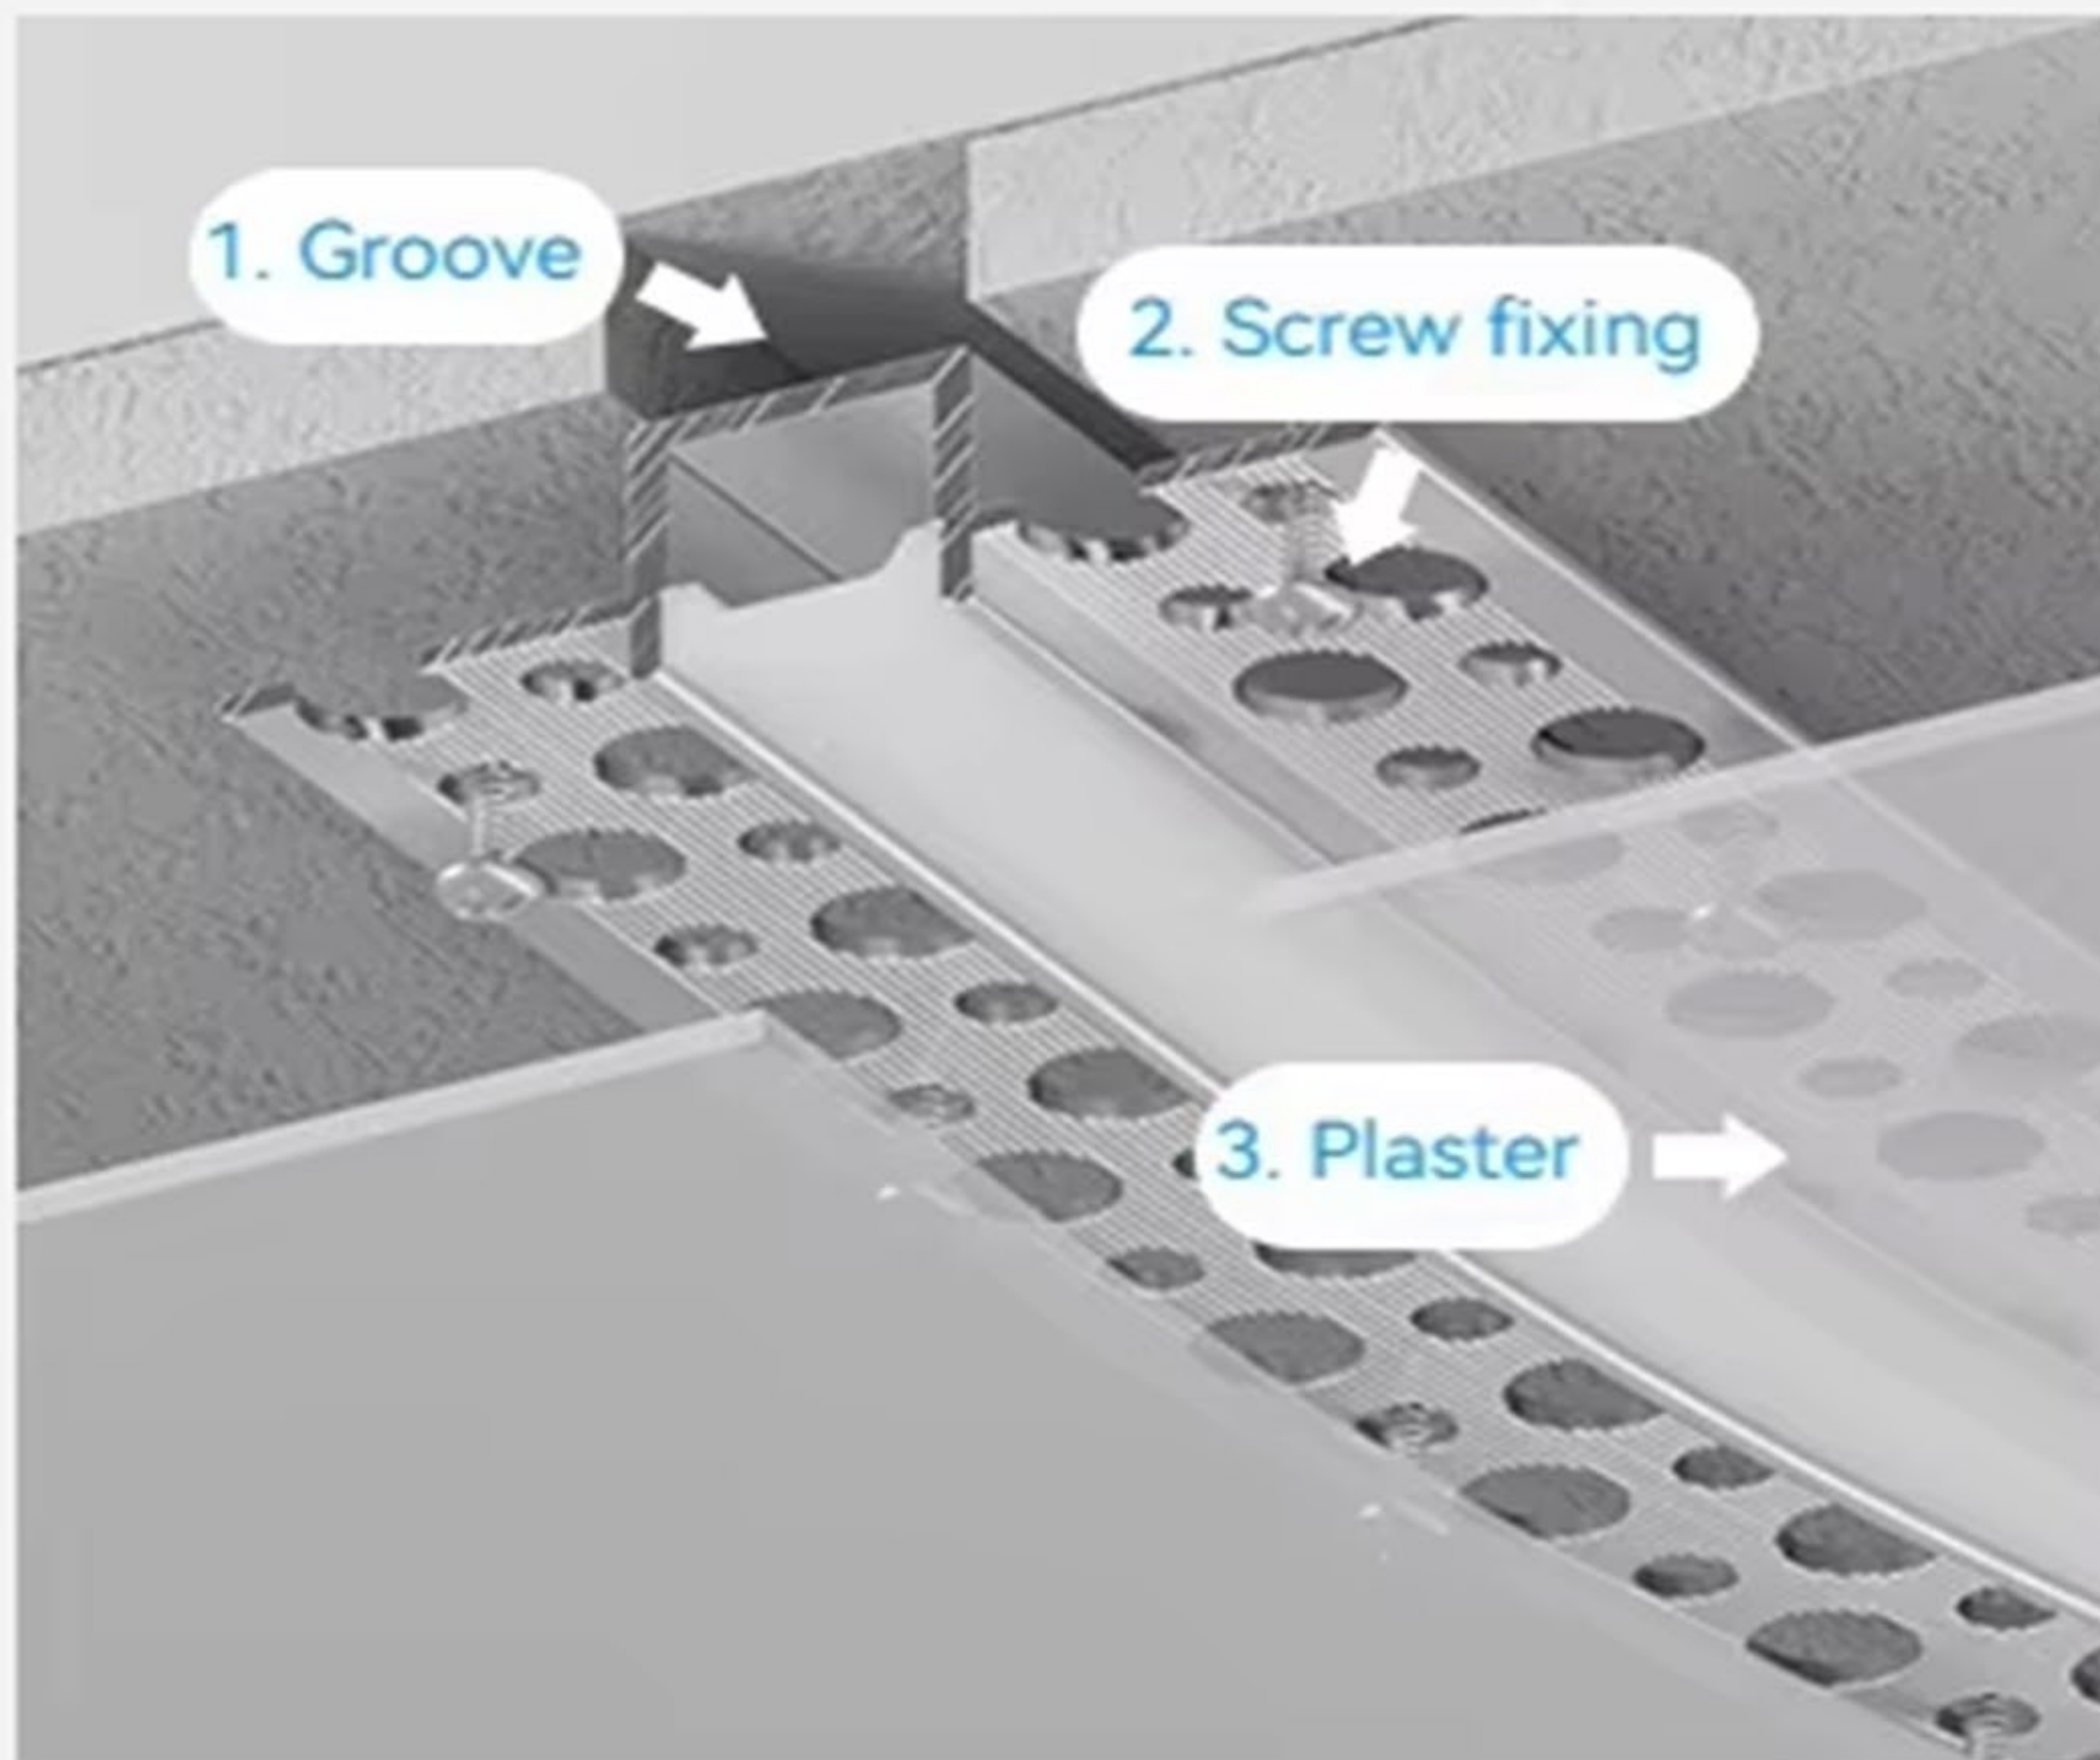

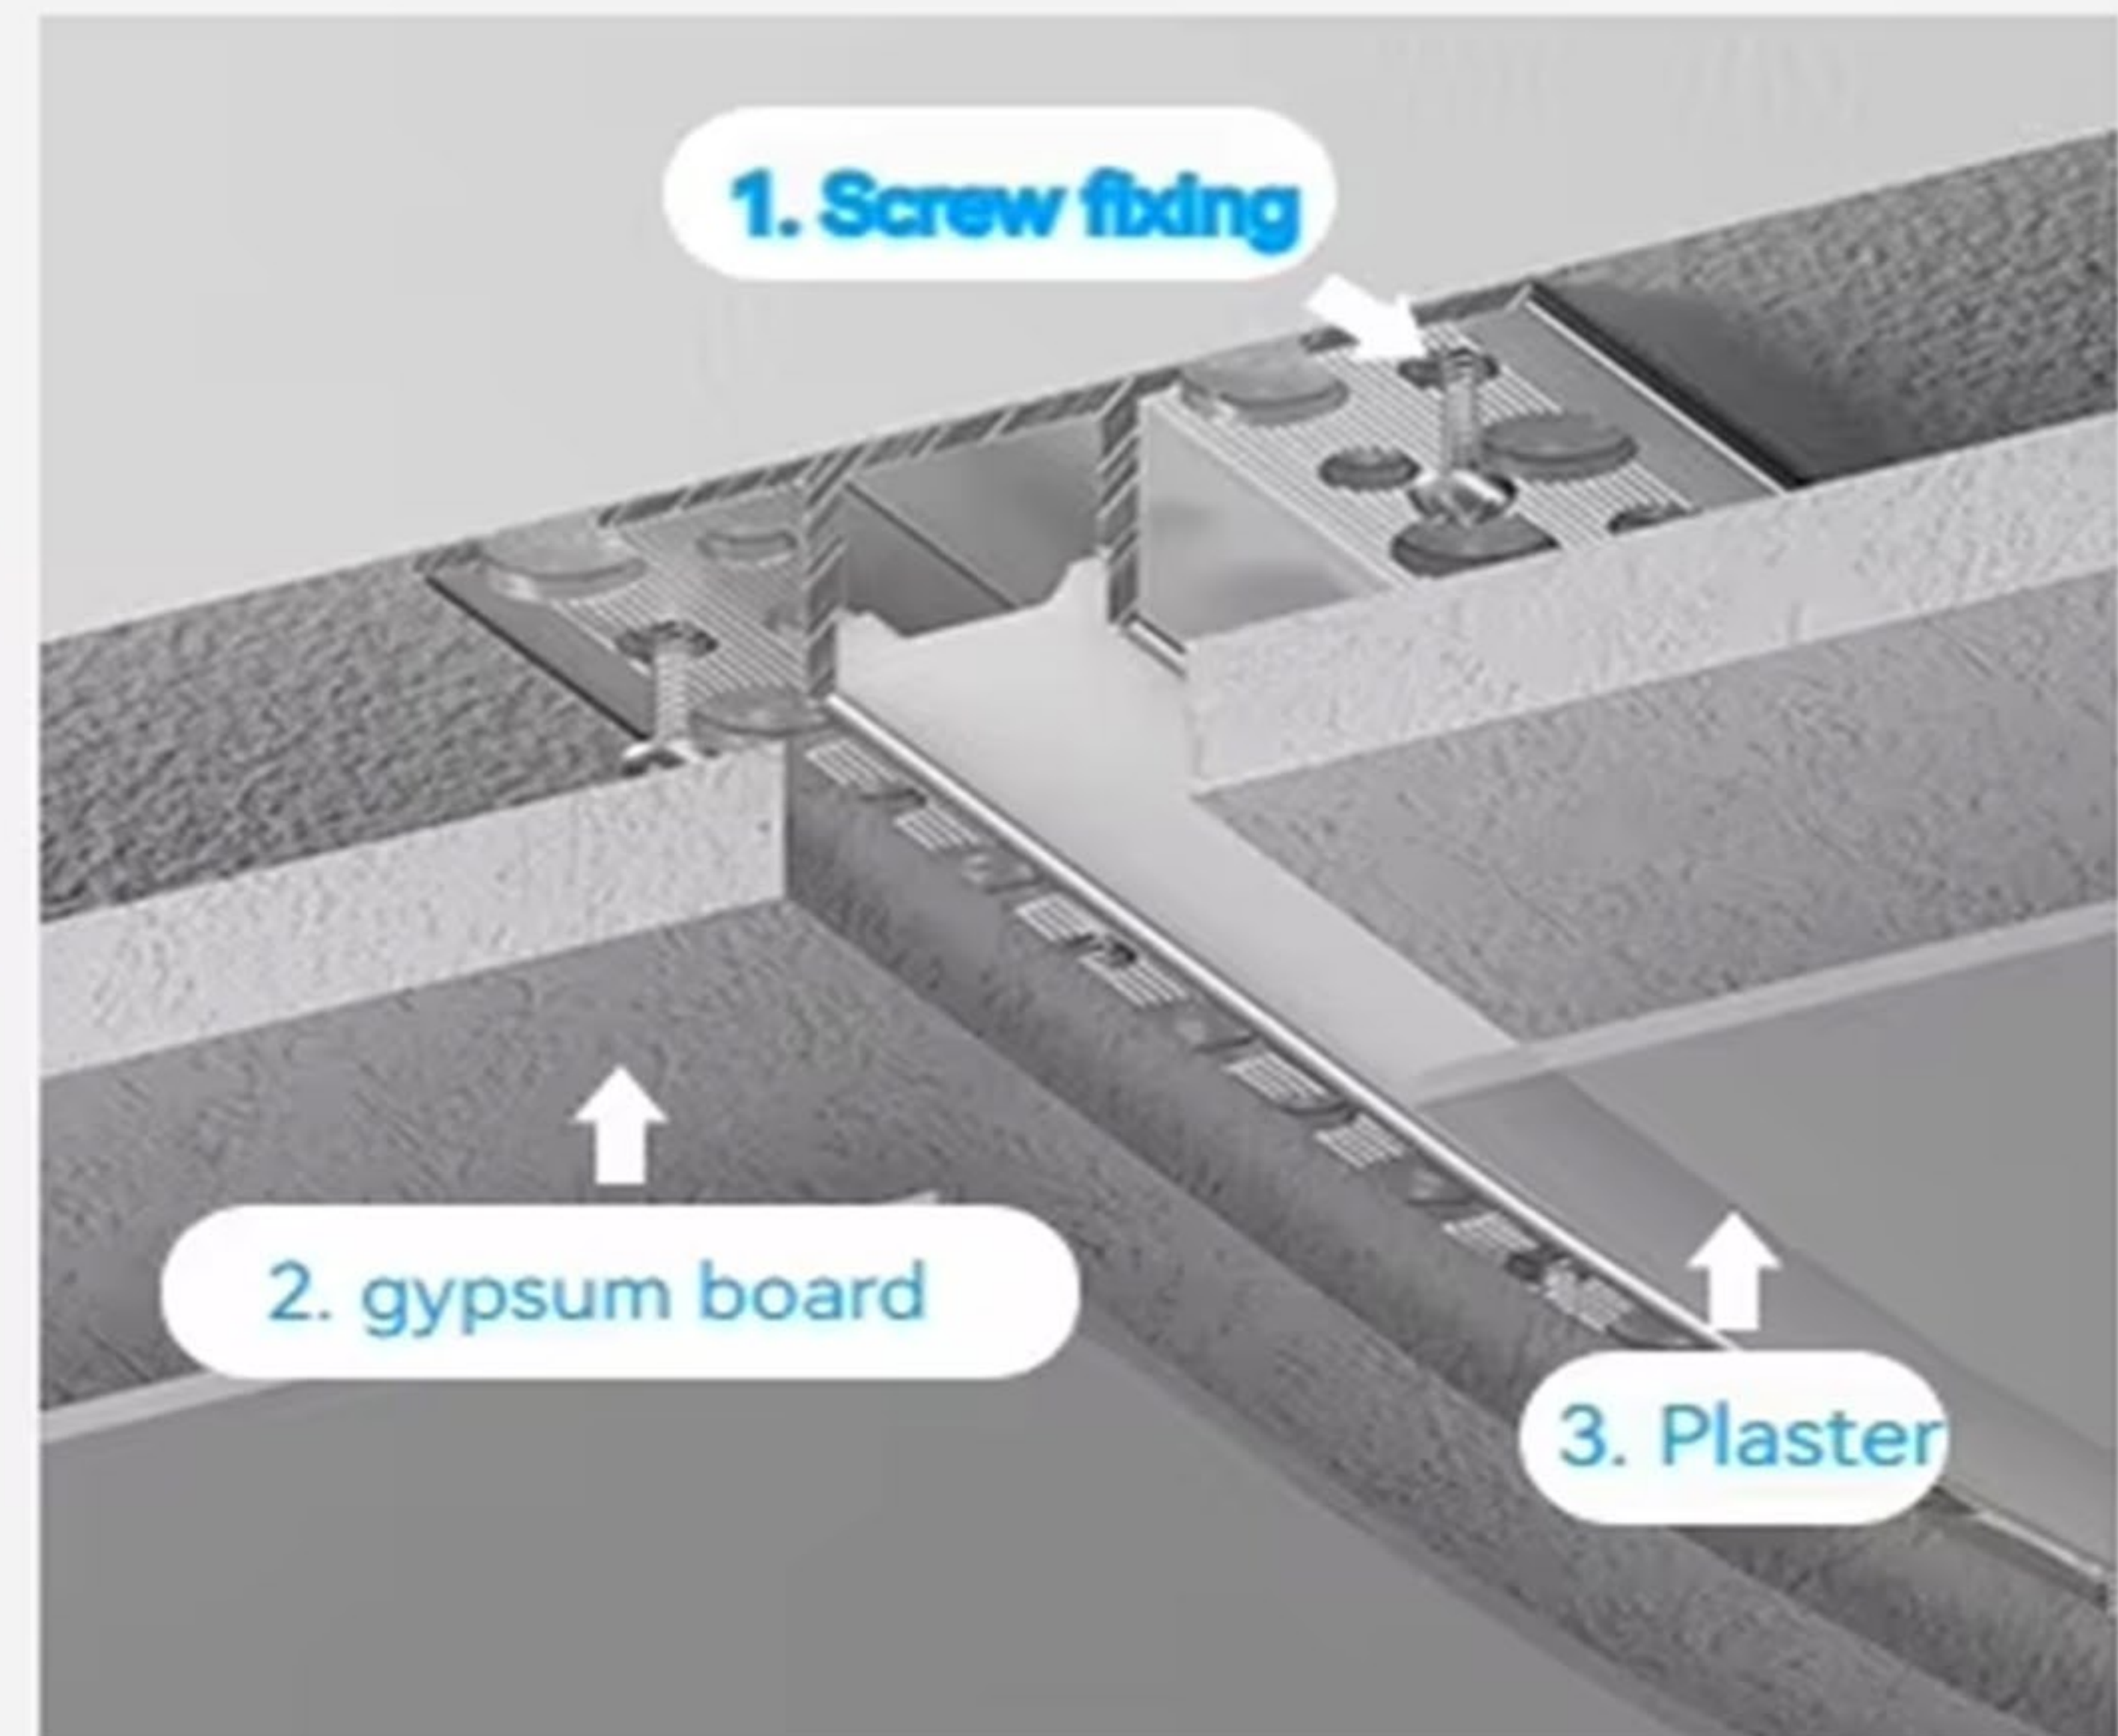

Upper Single side plaster

Lower single side plaster

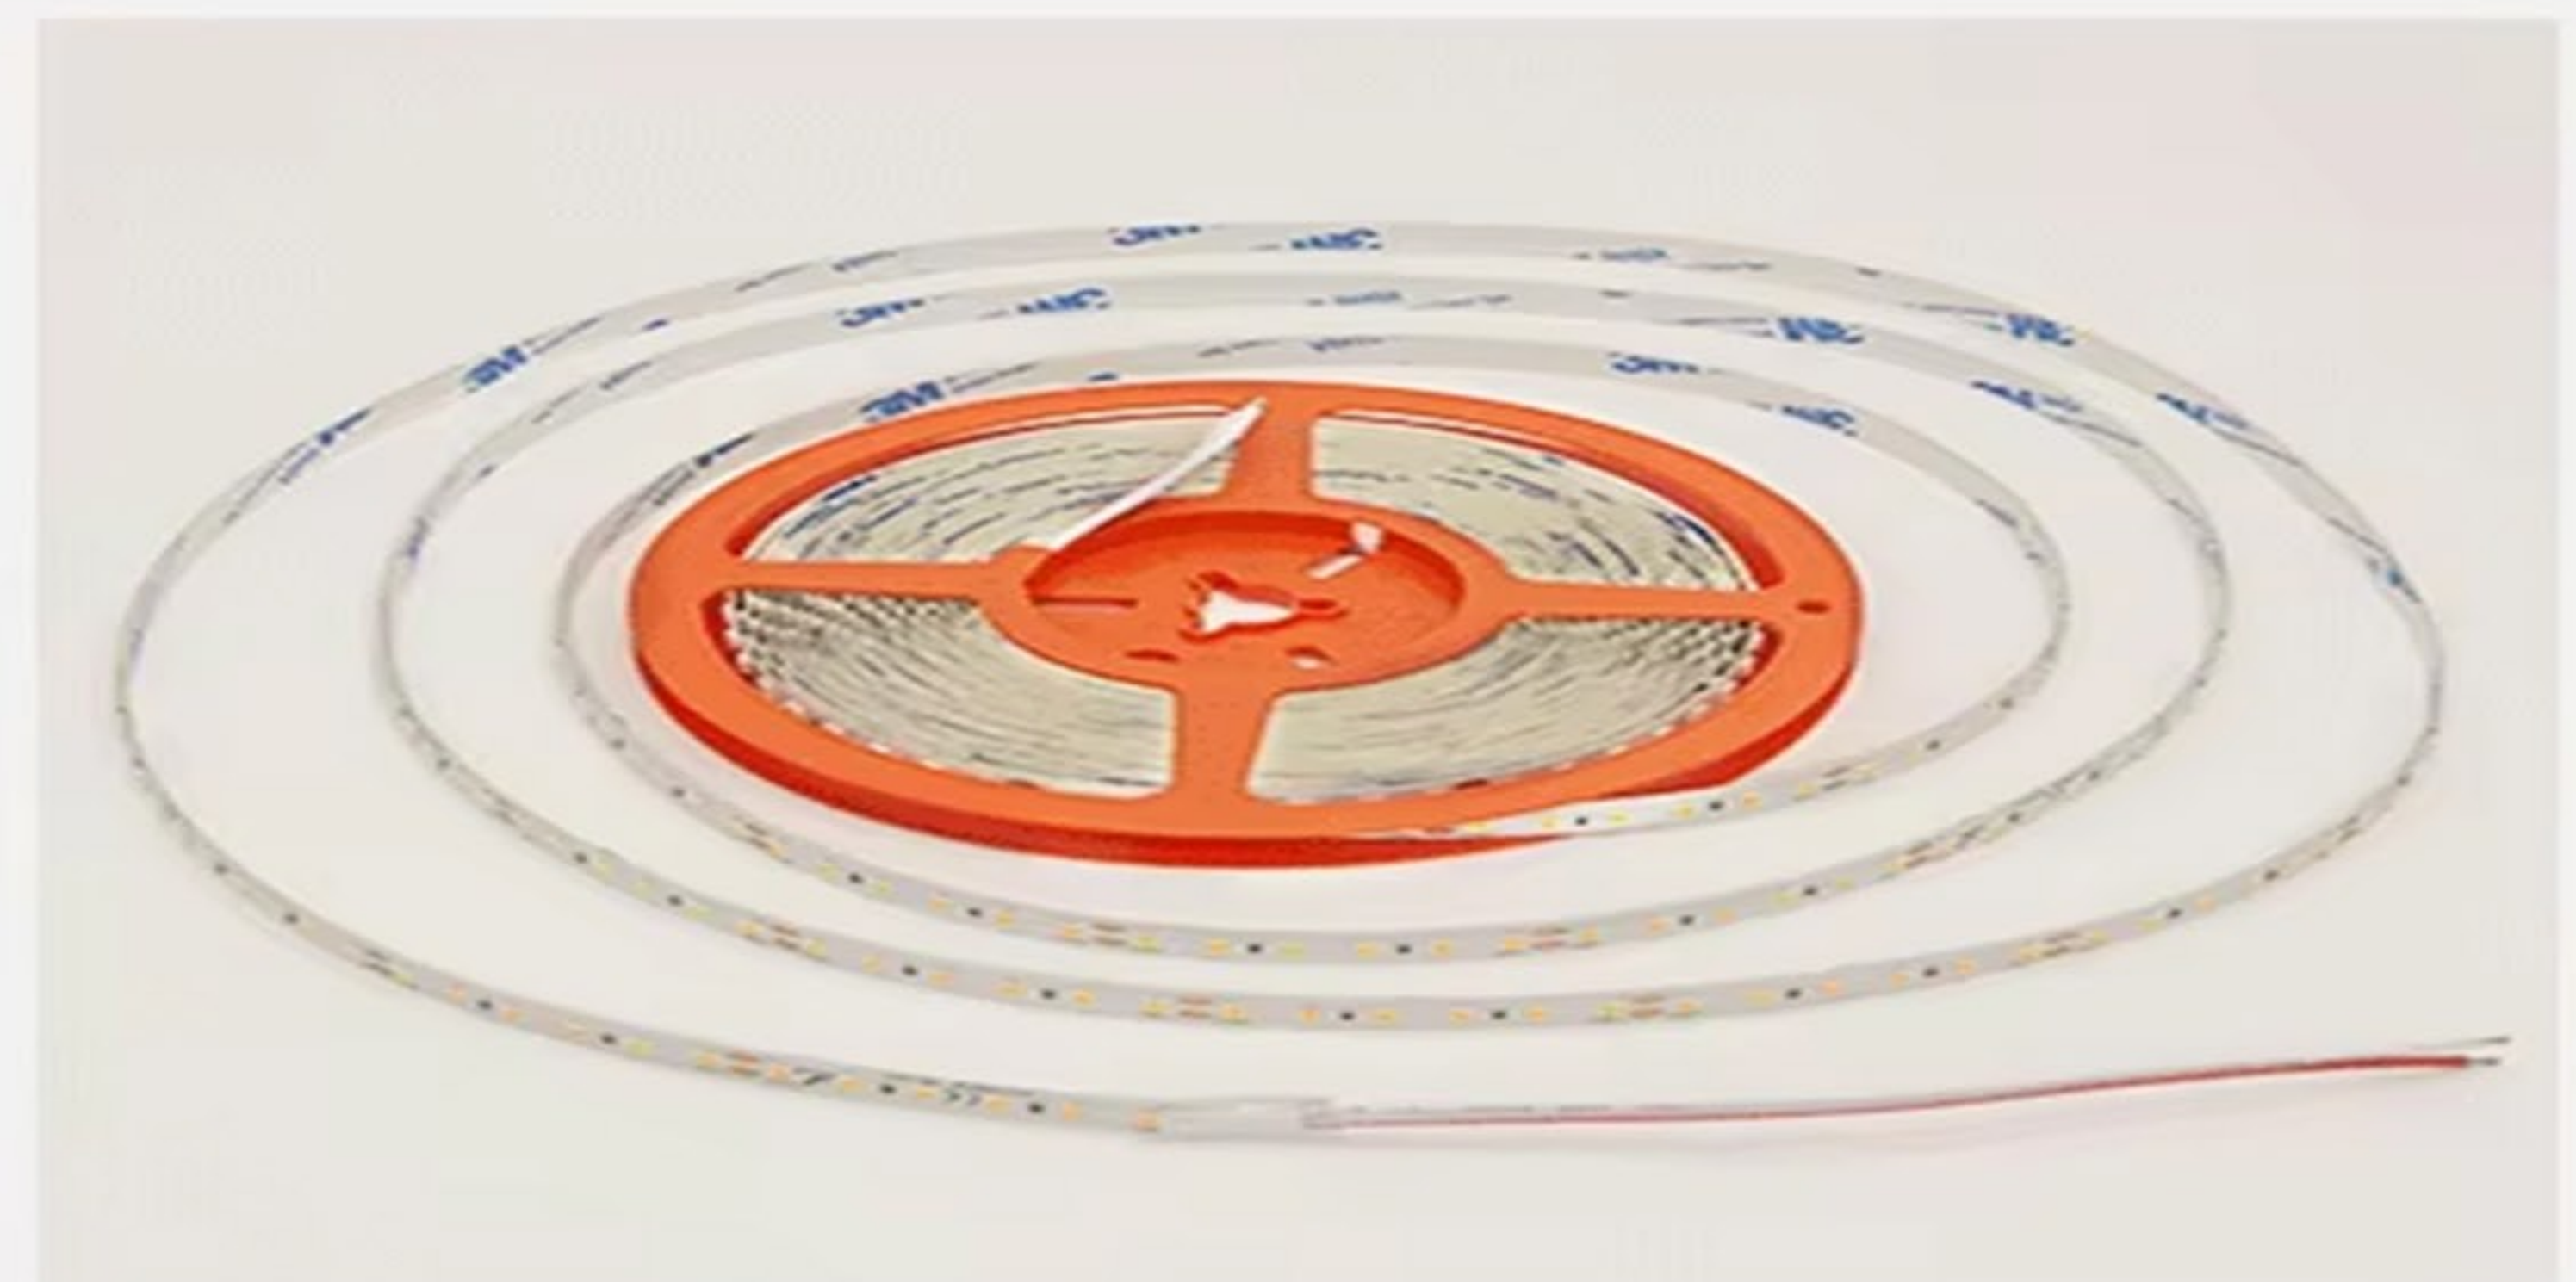

Upper double sides plaster

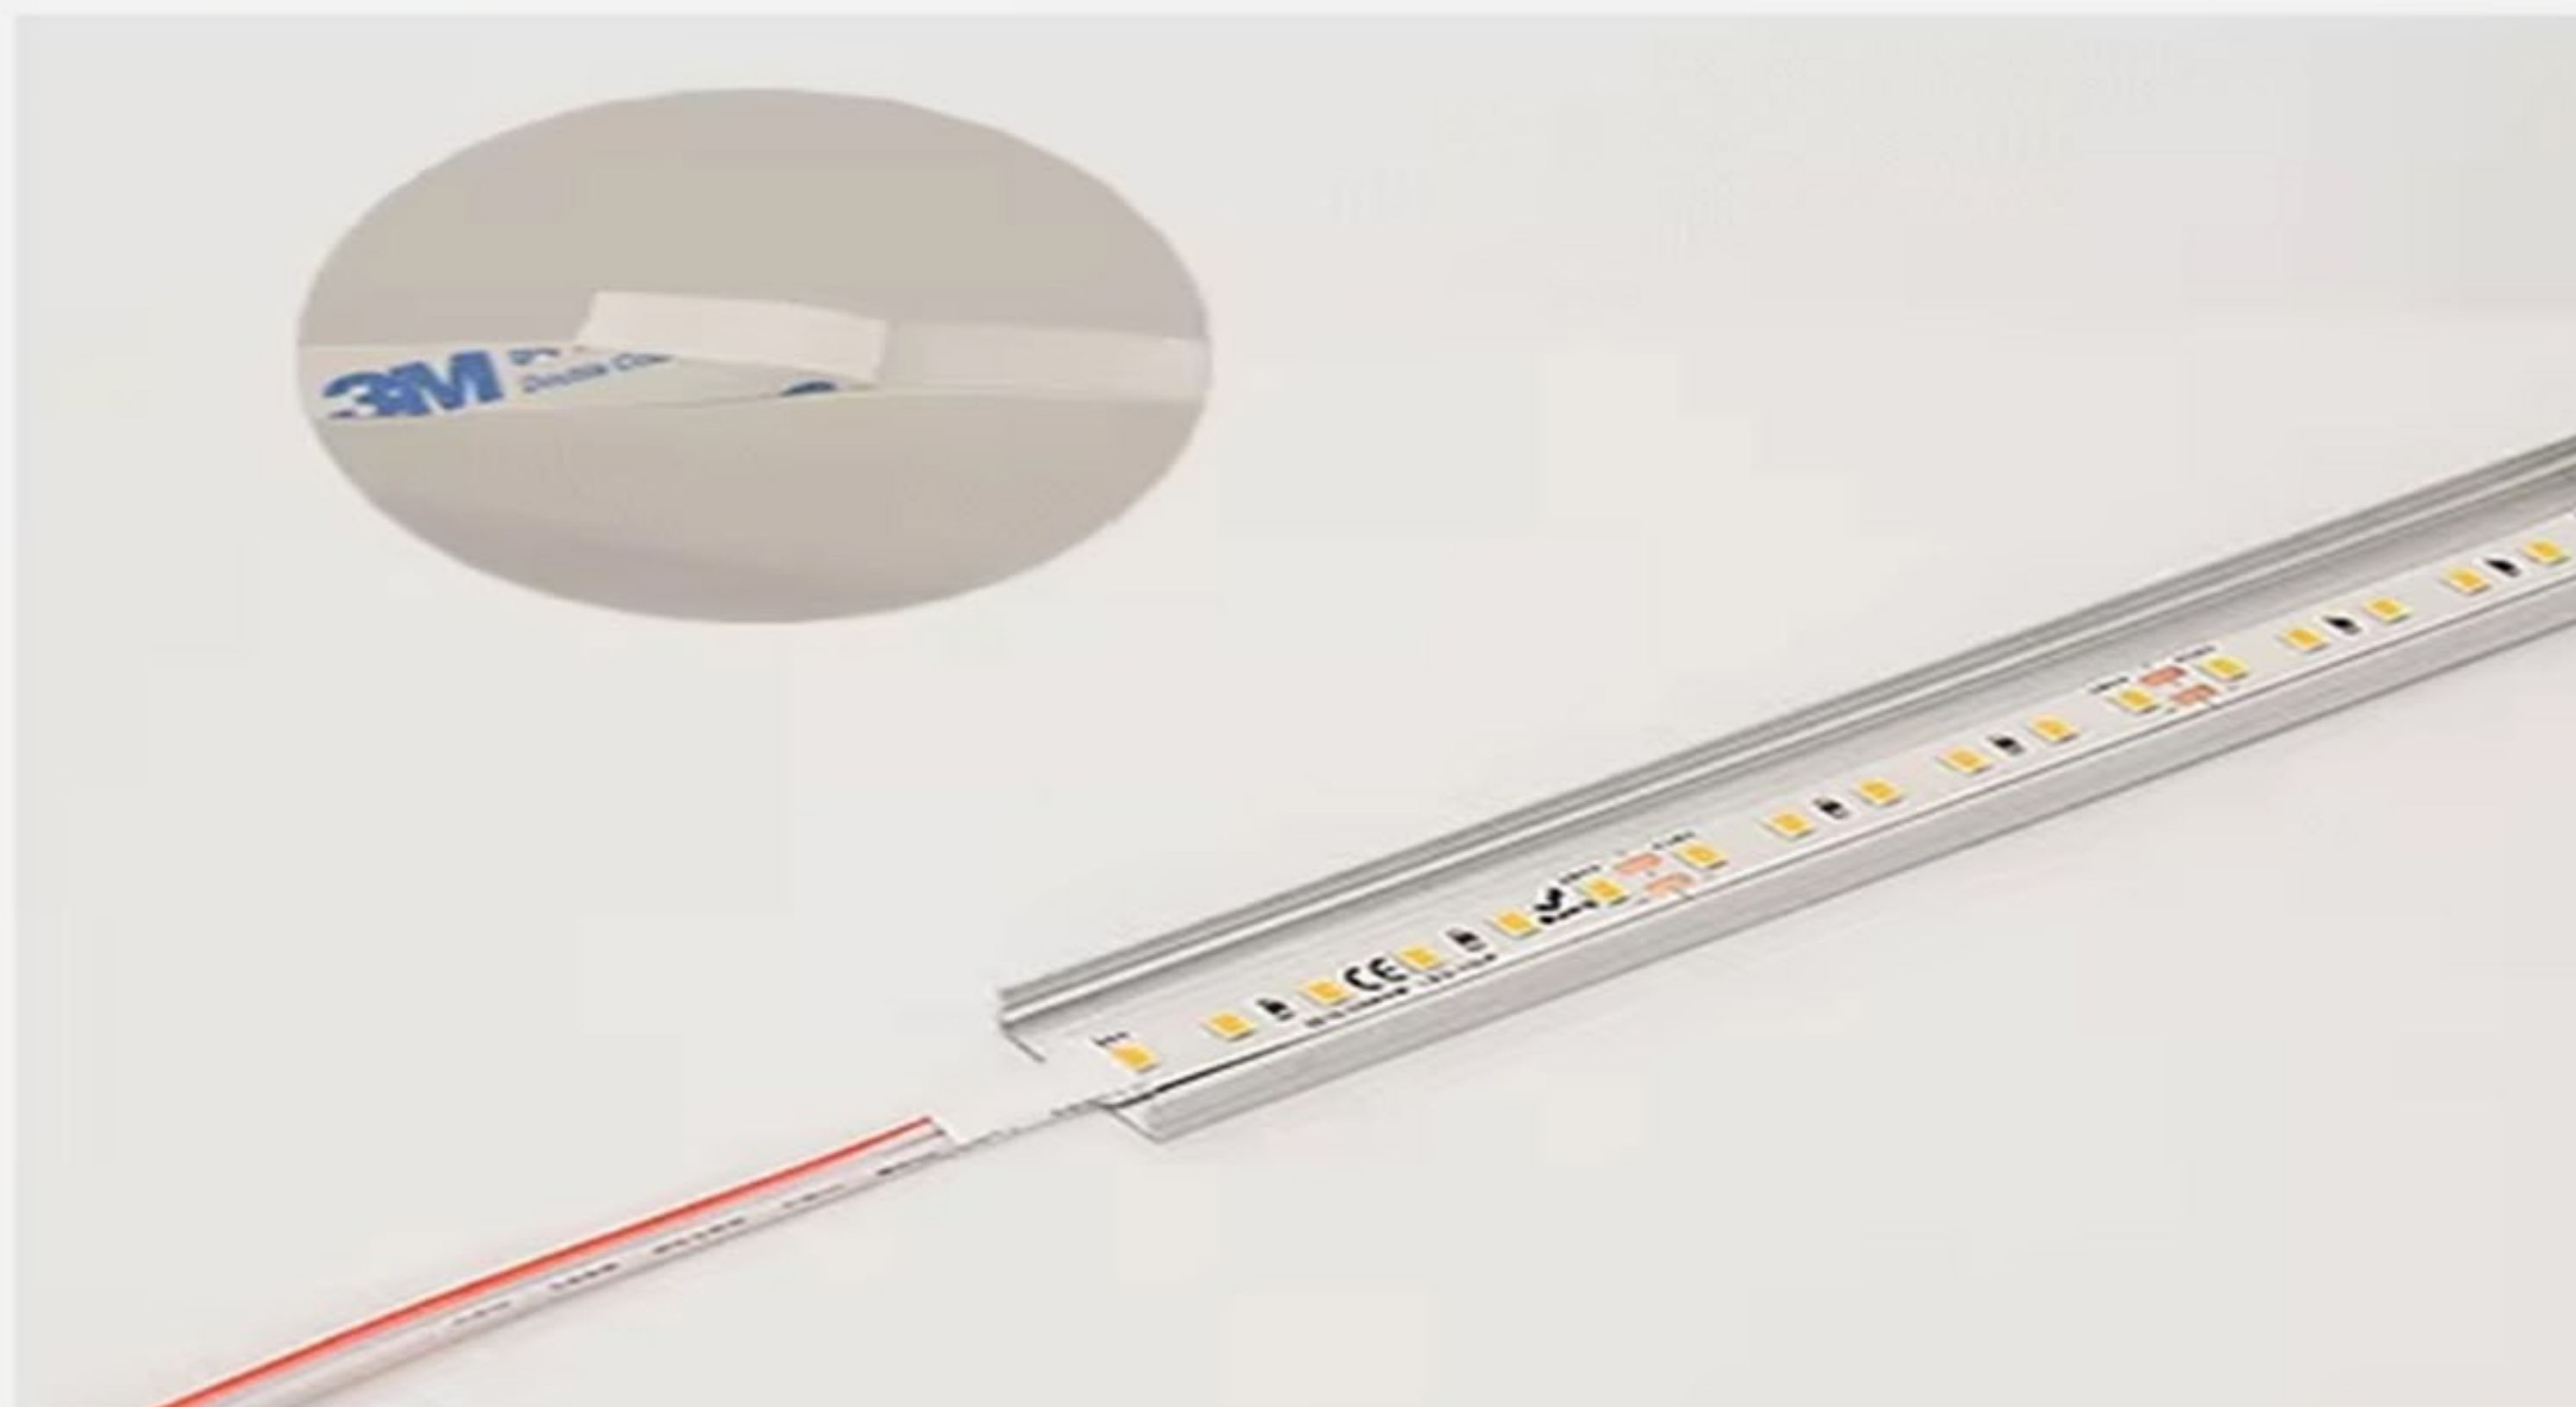

Lower double sides plaster

1 Get ready aluminum profile, LED strip light, transformer.

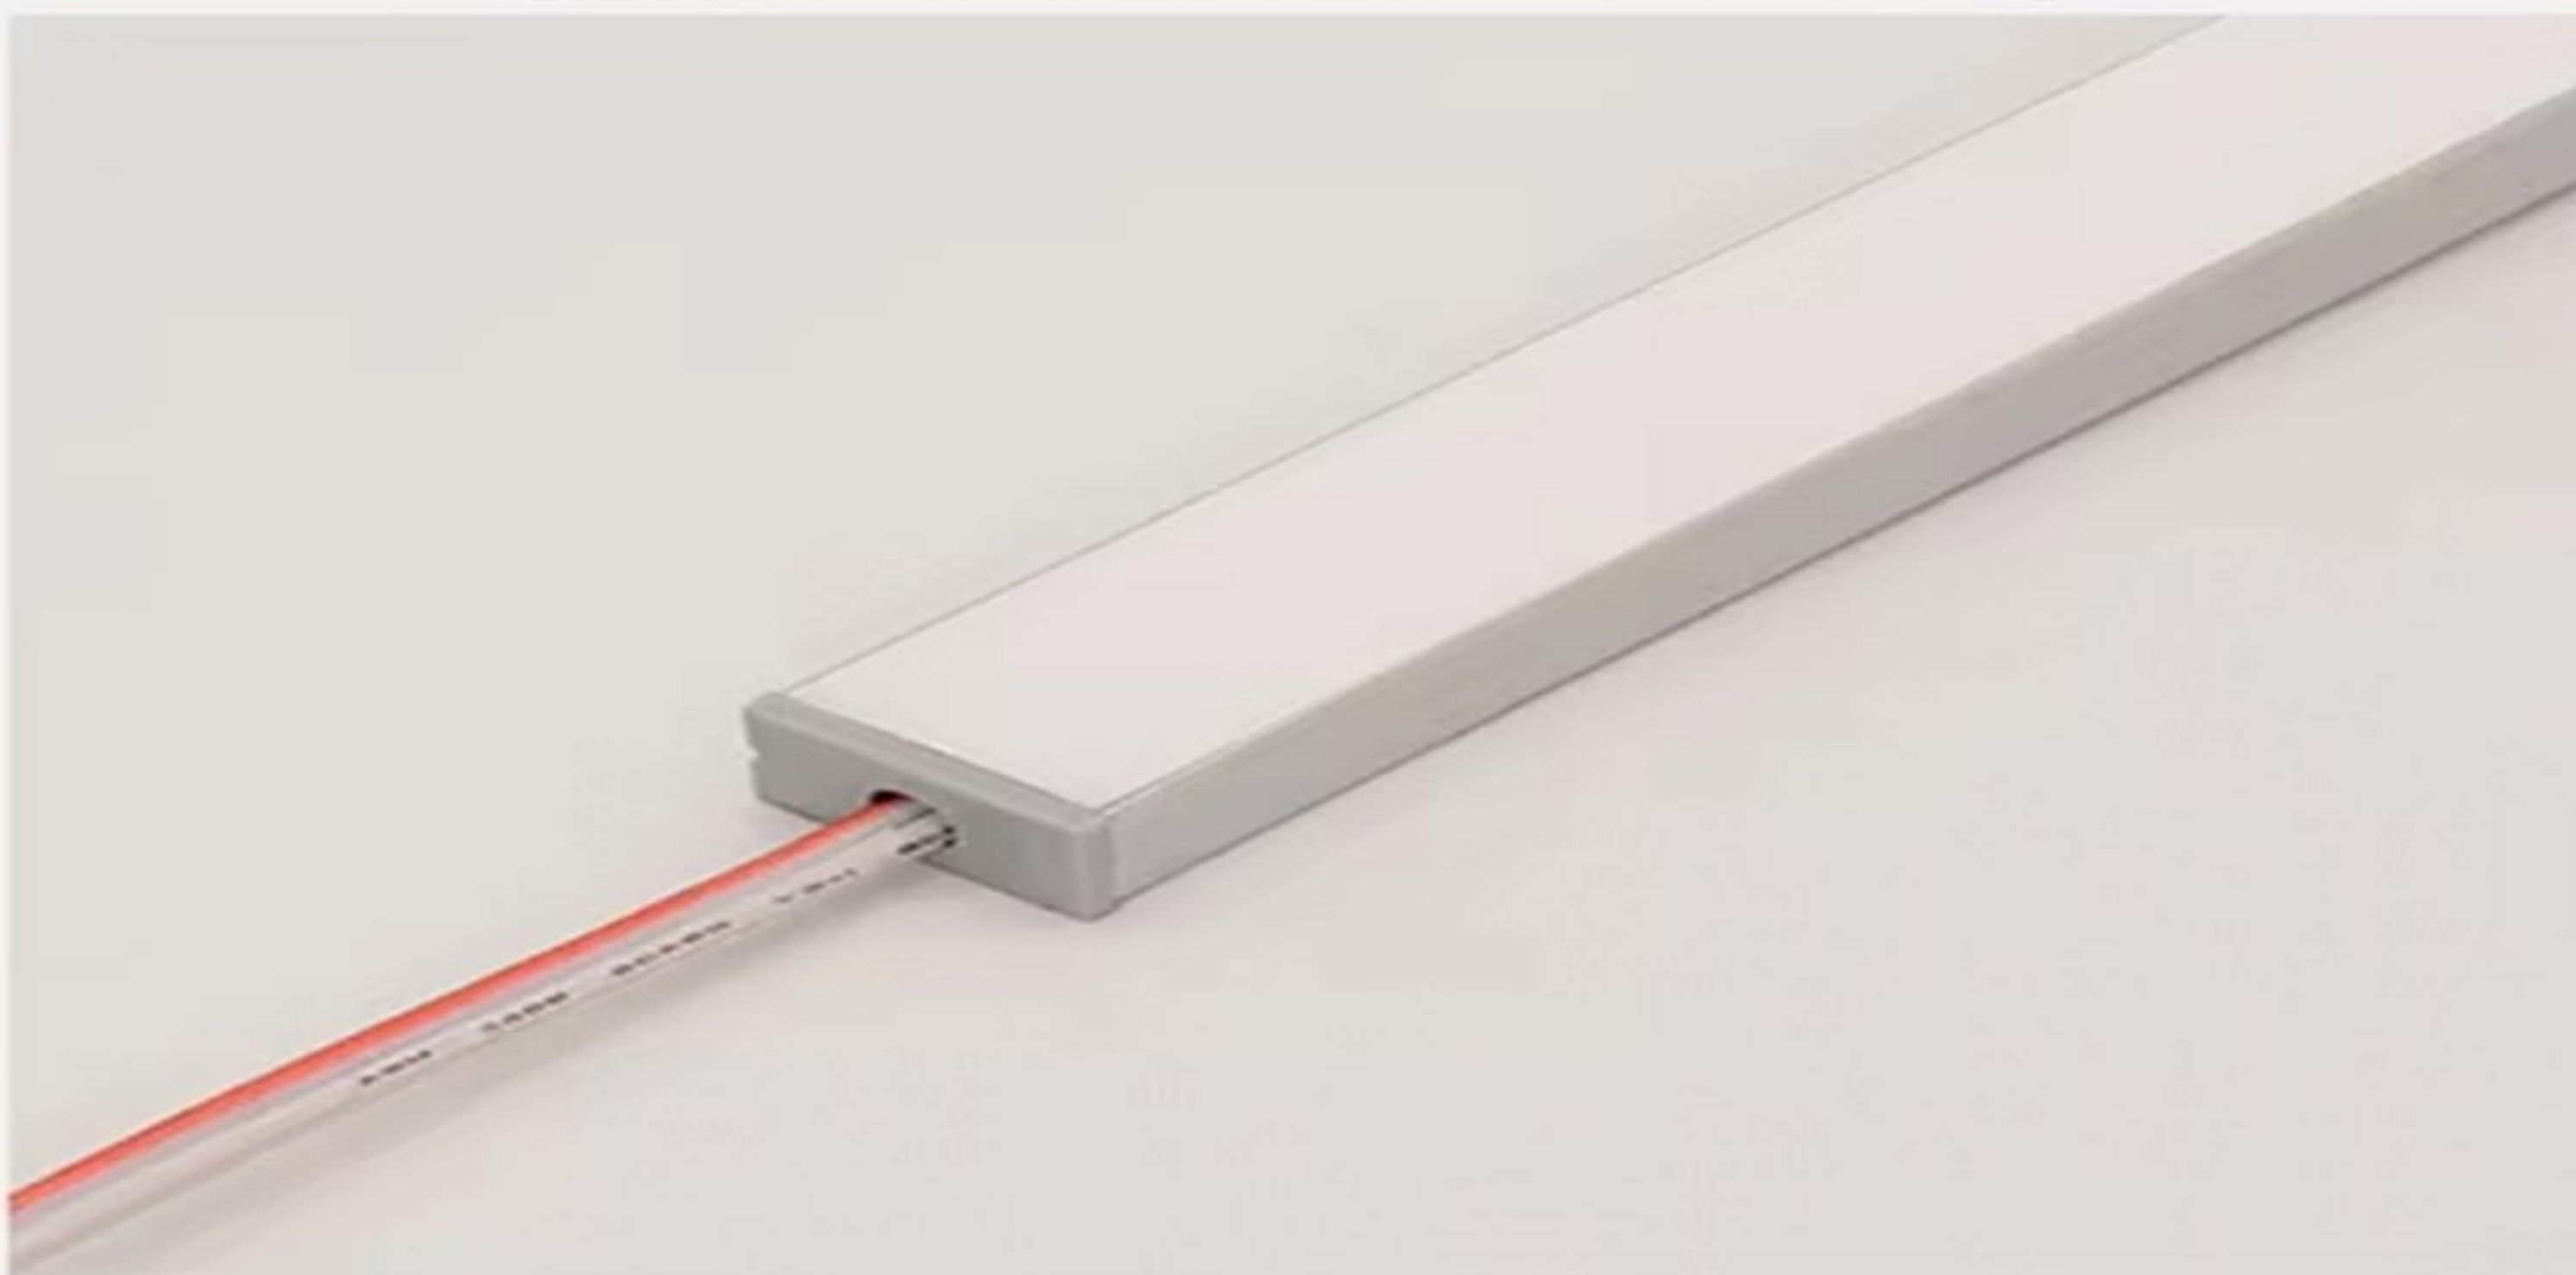

2 Test whether the LED strip light is working properly.

3 Peel off the tape on the back of the LED strip light and stick the LED strip light inside the aluminum profile.

4 Place the PC cover on the aluminum profile.

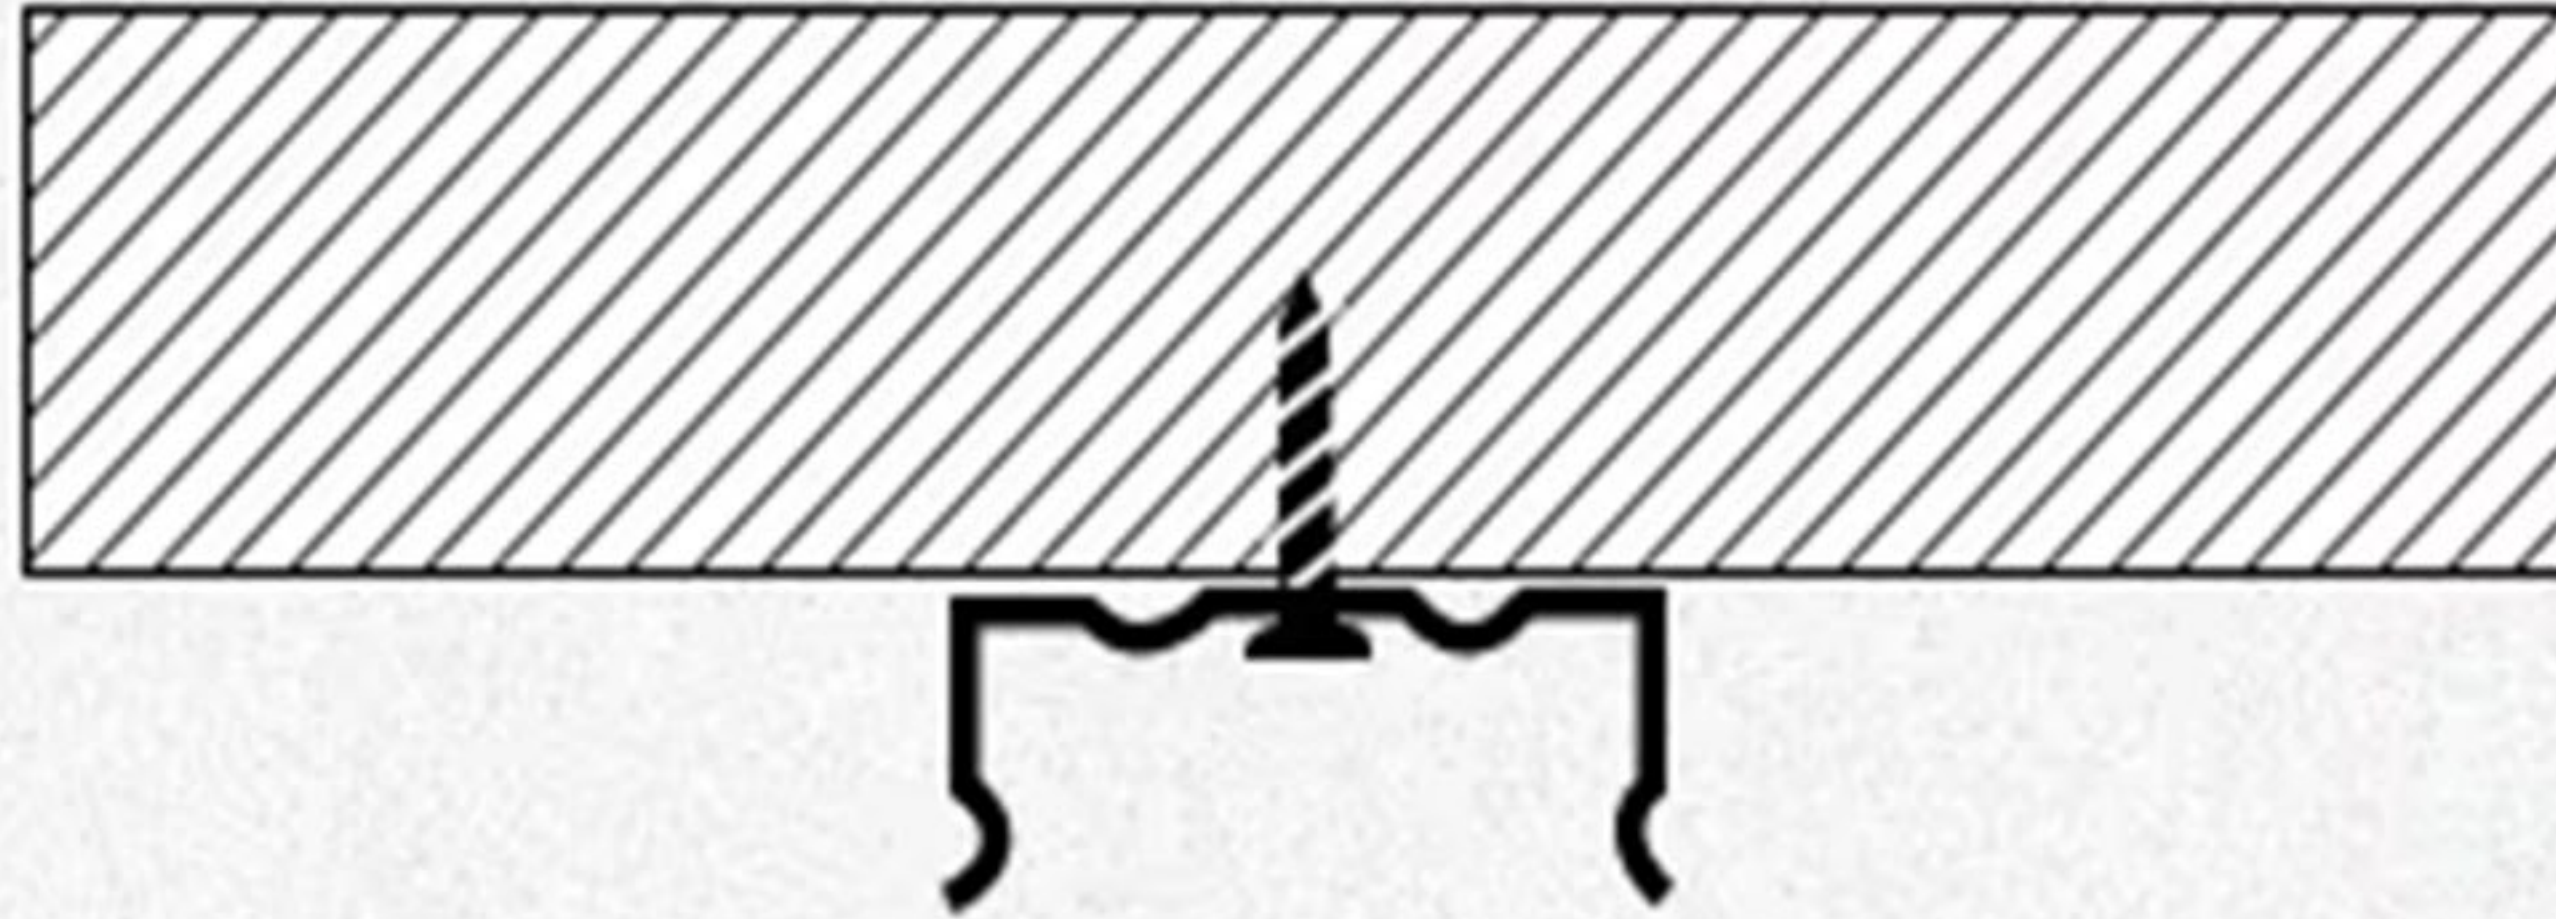

5 Install the end cap.

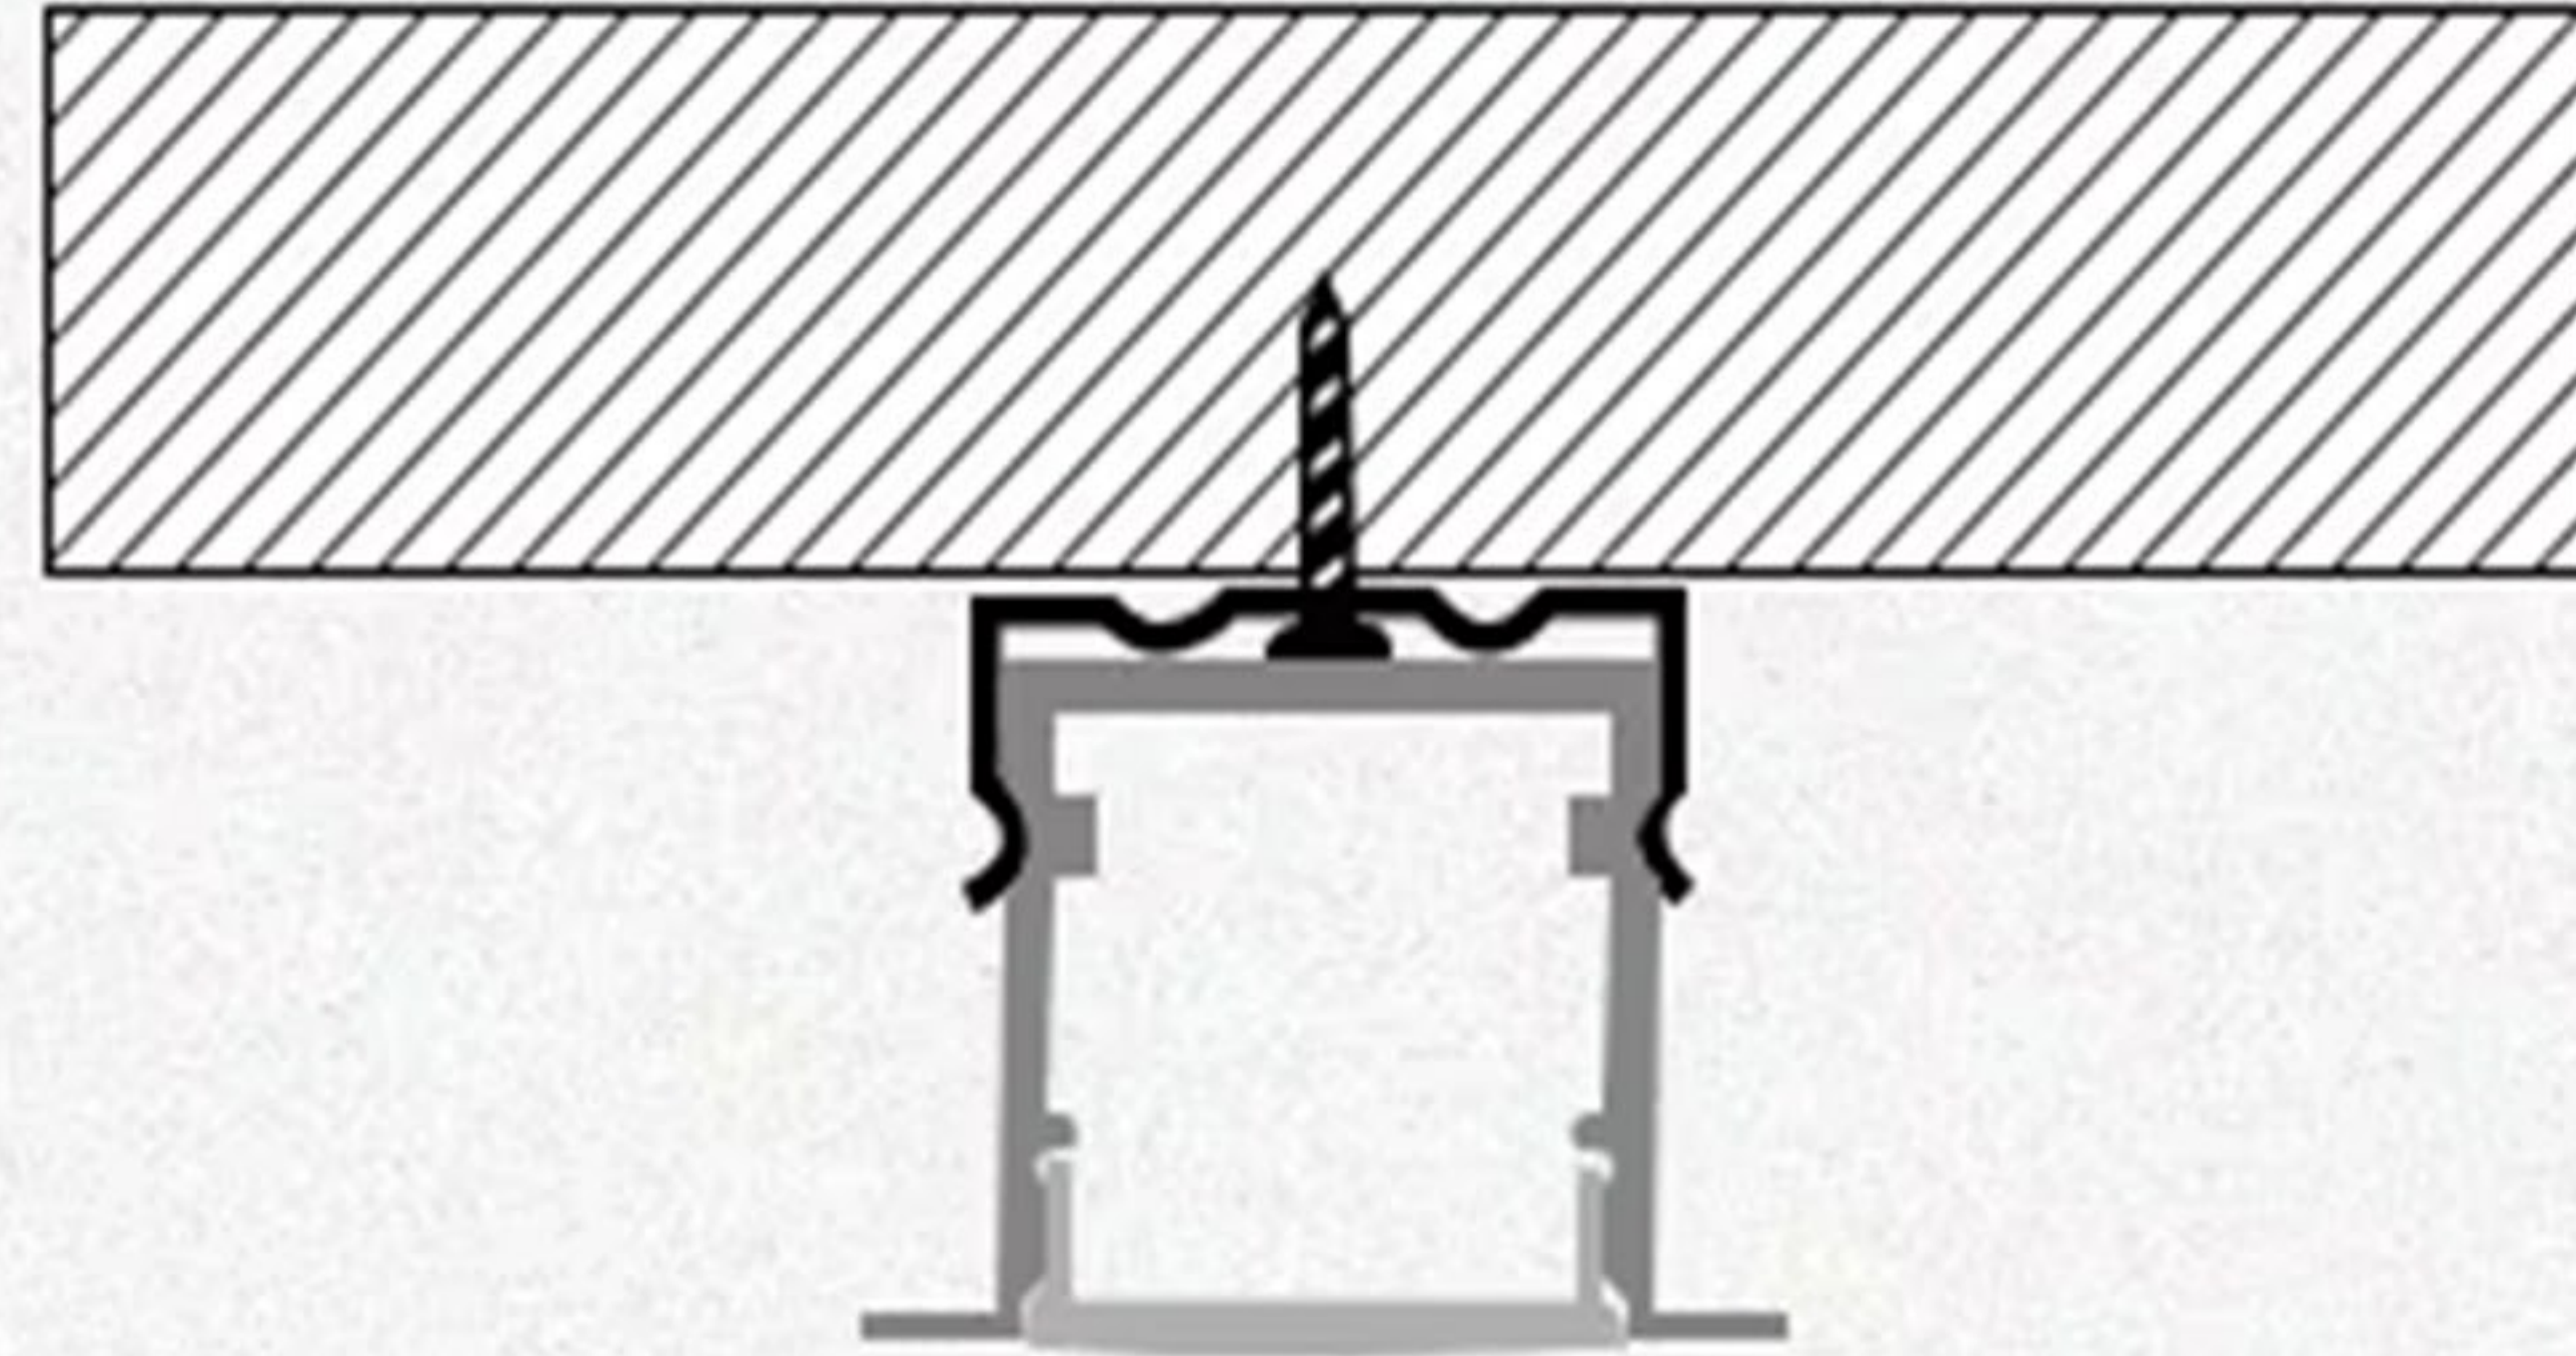

6 Connect the wire of the LED strip light to the transformer.

1 Surface mounted

1. Use screws to fix the buckle in place

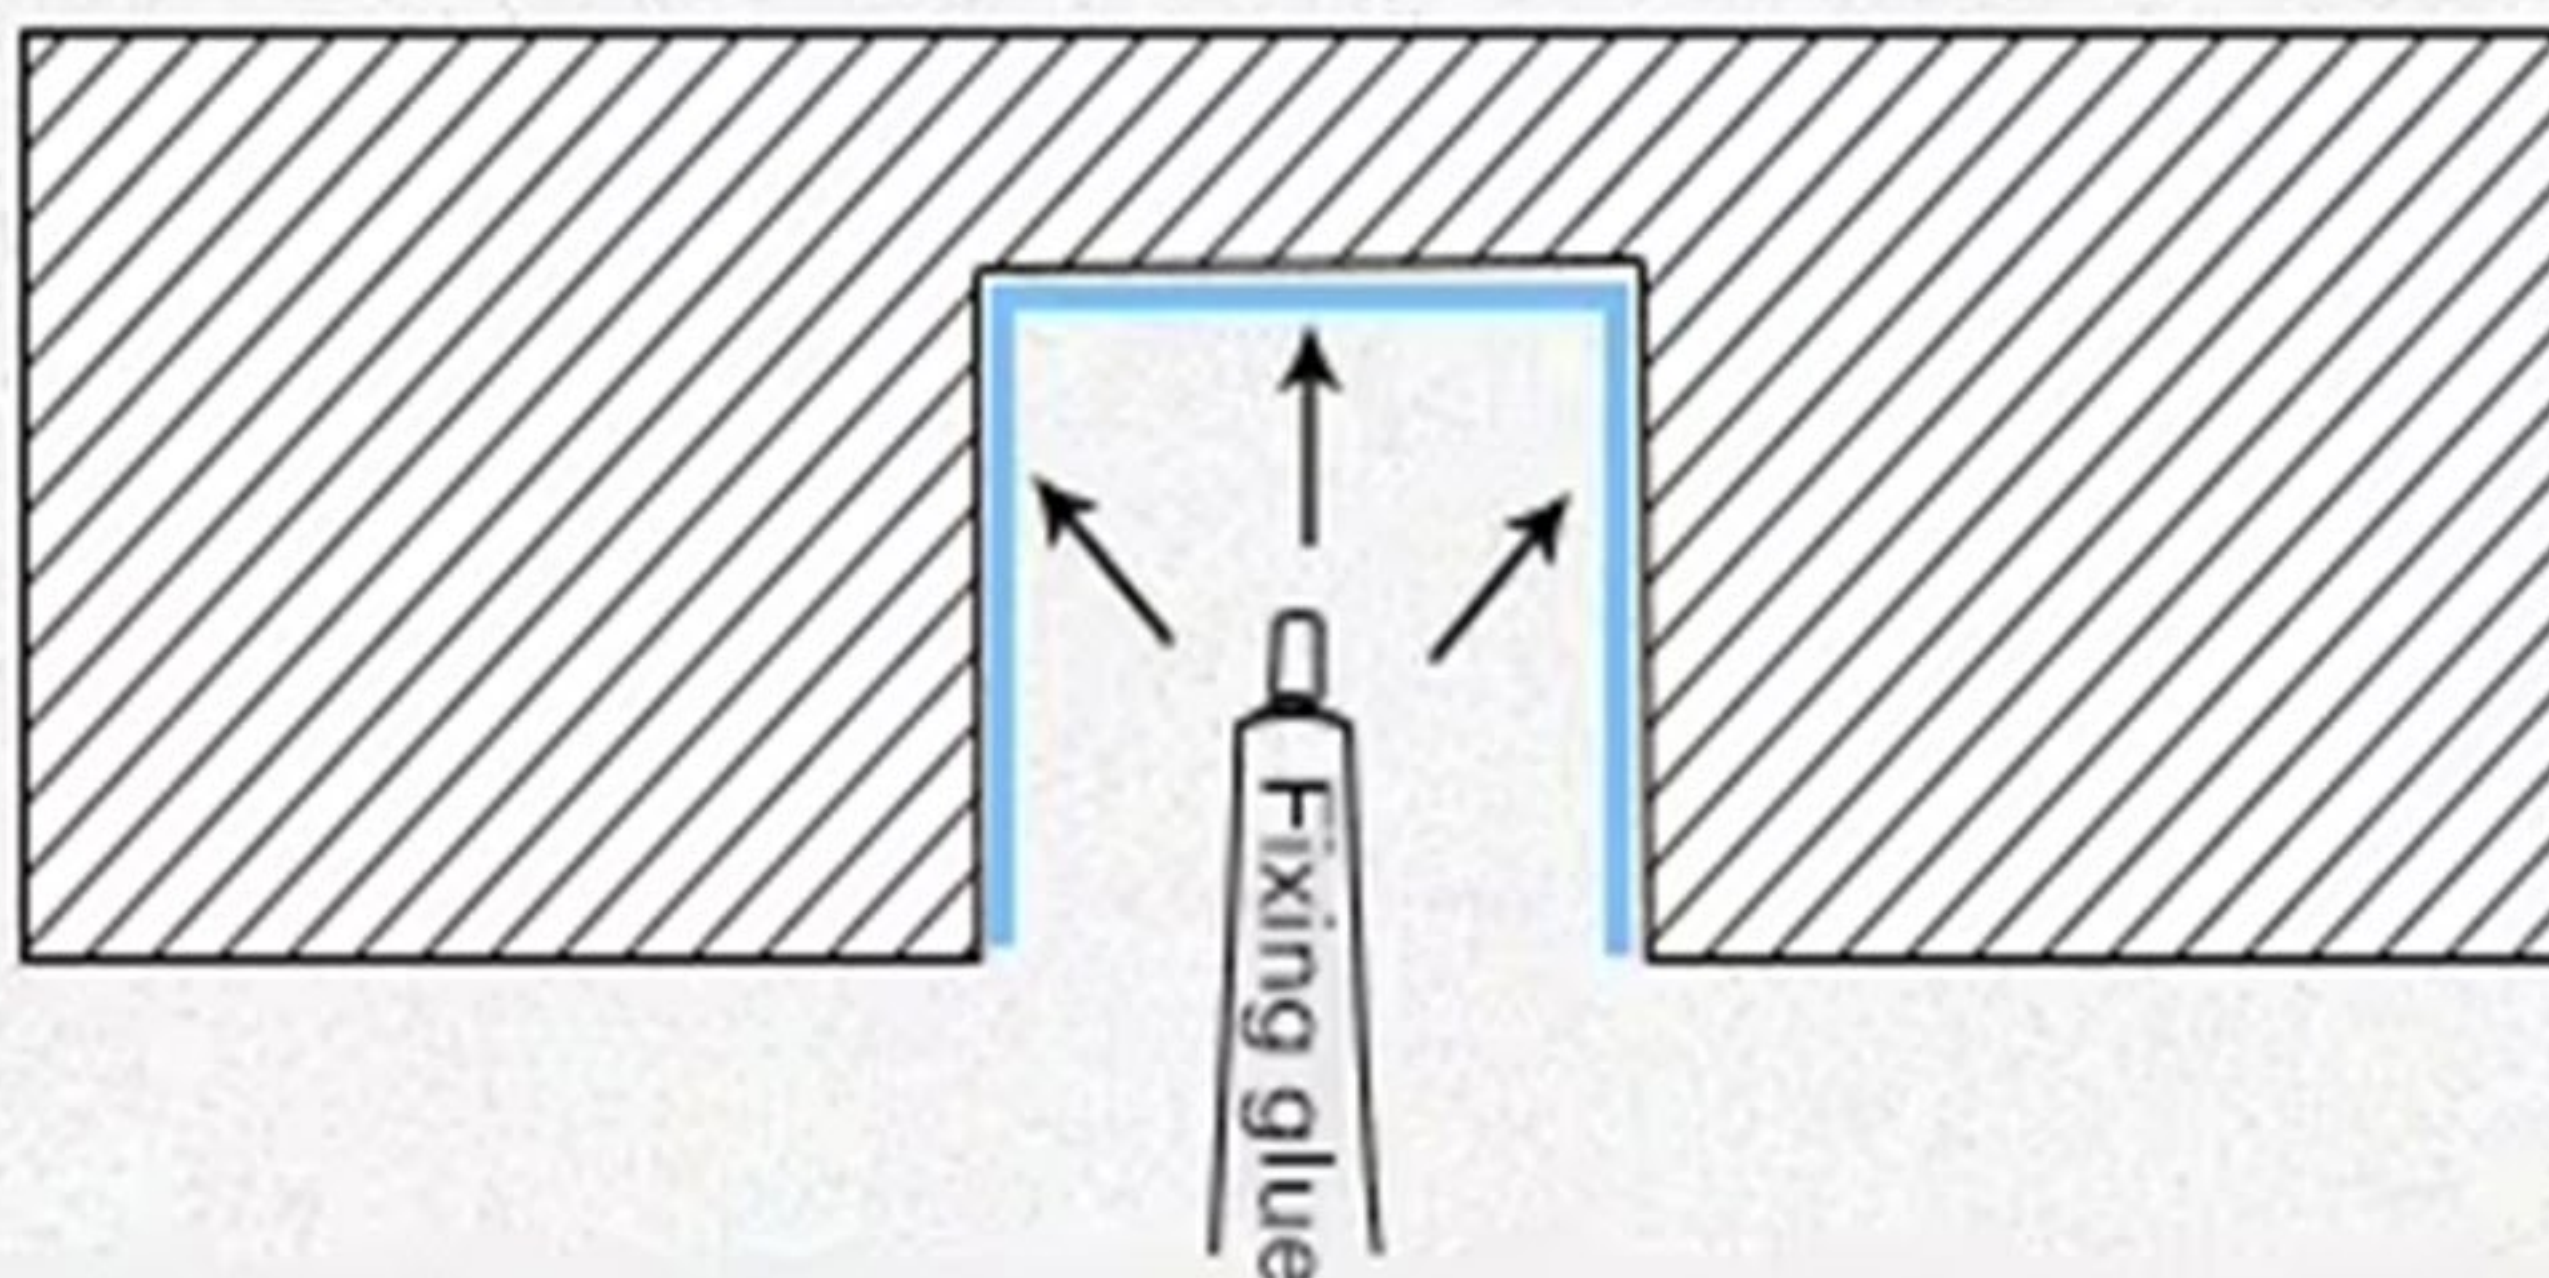

2. Align the aluminum groove with the buckle opening and press gently until it snaps into the concave point.

2 Embedded Installation

1. Make a groove according to the size of the aluminum groove, and then apply fixing glue around the groove.

2. While the fixing glue is still wet, align the aluminum slot with the groove and insert it into the groove. Wait for the fixing glue to dry.
